

# TAWANRUNG NAKATA

Senior Software Engineer

## CONTACT

☎ + (66)95-820-0676  
✉ tawanrung.nkt@gmail.com  
🌐 linkedin.com/in/tawanrung-nakata  
🏠 Khlong Samwa, Bangkok 10510

## TECHNICAL SKILLS

- **Languages:** Go (Fiber, GORM, JWT, HMAC), PHP (Lumen, Slim 4), SQL, JavaScript (WordPress)
- **Messaging/Cloud:** Kafka, AWS (Lambda, S3, SNS, CloudWatch)
- **Databases & Data Management:** MySQL, Redis (caching, RedLock)
- **Observability:** OpenSearch, Grafana
- **Testing:** testify (assertions), gomock (mockgen), unit & integration tests
- **Tools:** Docker, Jenkins, GitHub, Postman, DBeaver, SFTP, Jira, MS Teams, Slack

## PERSONAL

- Leadership & Mentoring
- Cross-team Collaboration
- Clear Communication
- Adaptability in Agile Delivery
- Conflict Resolution & Stakeholder Alignment

## EDUCATION

**Bachelor of Computer Science**  
Ramkhamhaeng University, Bangkok  
(2018–2022), GPA: 3.31

- ML: GAN/StyleGAN2 portrait editing (Python, scikit-learn, Keras).
- iOS: Swift app development

**Bachelor of Business Administration (Accounting)**  
Ramkhamhaeng University, Bangkok  
(2010–2015)

## PERSONAL STATEMENT

Senior Software Engineer building CRM and loyalty backends on a multi-tenant platform adopted across 6+ enterprise client deployments, supporting 10+ consumer brands in F&B and retail. Experienced in architecting scalable backends, integrating third-party services, and strengthening legacy platforms through performance tuning and structured modernization in Agile environments. Driving shared engineering standards and mentoring developers across client deliveries.

### Key Highlights:

- Designed and developed the CRM multi-tenant backend in Go, applying Hexagonal and Clean Architecture with public-facing and internal service layers for membership, loyalty, coupon, and transaction workflows.
- Built a reusable internal Go library adopted across 10+ microservices and batch jobs, centralizing promotion engine, credit/coupon logic, Redis caching, and Kafka event publishing.
- Drove end-to-end migration of the promotion API from PHP to Go, leading the team in technical design and service-layer structure, fully replacing stored-procedure logic with optimized queries and reducing nonprod response time from ~20s to ~5s.
- Introduced the organization's first runtime-configurable log level framework, paired with OpenSearch, Grafana, and CloudWatch observability across nonprod and prod.

## WORK EXPERIENCE

**Senior Software Engineer**  
**DeepBlok, Bangkok**  
Jan 2023–June 2026

- Delivered production REST APIs and scheduled jobs for multi-tenant CRM workloads, serving as technical point of contact for shared platform standards—including logging and observability rollout—across client teams.
- Owned rollout of the shared Go library across CRM and client deployments (e.g., Minor Food, City Mart), standardizing promotion, credit/coupon, and Kafka event publishing to align teams on a single loyalty implementation standard.
- Led modernization initiatives migrating legacy PHP services and stored procedures to Go across CRM platforms, improving API latency, maintainability, and operational reliability through query optimization, Redis caching, and algorithmic improvements on high-traffic endpoints.
- Integrated third-party services including payment gateways (Omise) and partner platforms (Hypcode), alongside AWS Lambda, S3, Kafka, and SFTP workflows.
- Established unit/integration tests, health checks, Jenkins CI/CD, and on-call support—including incident triage and remediation (e.g., cross-client date validation gaps affecting member data).
- Mentored junior developers on sprint planning, estimation, and code quality; collaborated with Dev-Lead, QA, and DevOps to align delivery with business goals.

## KEY CLIENT ENGAGEMENT – DEEPBLOK

---

### DeepBlok CRM

- Core loyalty platform powering 60+ brands and 16M+ members (company-wide scale), supporting multi-tenant member, points, coupon, promotion, and stored-value transactions — adopted across 6+ enterprise client deployments.
- Rebuilt core loyalty transaction modules: promotion calculation, credit top-up, usage, and void flows, improving reliability and auditability for high-volume operations.
- Developed central configuration service functions used by CRM microservices and scheduled jobs, standardizing config access and encrypted credential handling across the platform.

### Minor Plus App

- Developed RESTful APIs for mobile and eCommerce features including member registration, profile management, coupon handling, consent tracking, third-party integrations, and gamification features—optional in-app game participation with separate participant scoring and promotion-service integration for reward redemption.

### Minor Food CRM

- Built loyalty backend services—RESTful APIs and scheduled jobs—for 6 Minor Food brands (The Pizza Company, The Coffee Club, Dairy Queen, Swensen's, BonChon, and Sizzler).
- Implemented CDP integration for The Pizza Company, Swensen's, and BonChon—backend jobs and APIs exporting customer/member data to AWS Lambda for downstream brand reporting and data distribution.
- Delivered a full LINE LIFF backend rebuild for Steak & More, implementing member, loyalty, and promotion workflows for the brand's LINE-based customer experience.

### City Mart – The City Rewards App

- Led migration of legacy PHP services and AWS Lambda functions to Go for The City Rewards platform, improving performance, scalability, and maintainability. Optimized POS and mobile integrations with CRM APIs through caching strategies for better store-level reliability.

### KBank – THE WISDOM Privilege

- Implemented special-privilege quota validation functions within CRM backend services, verifying member eligibility and remaining quota on the KBank WISDOM platform.

### Jaymart – JPoint

- Integrated JPoint loyalty APIs into CRM backend services, enabling cross-platform point and member data exchange.

## FREELANCE

### WordPress

2015-2021

- Developed and maintained WordPress/WooCommerce sites for small businesses.

### ACCOUNTING/AUDIT

### MULTIPLUS AUDIT & CONSULTING

2015

- Processed general accounting transactions, AP workflows, invoicing, and inventory management.
- Supported audit clients in improving financial systems from purchase orders through payroll and stock control.
